

## Group entry of new gilts

It is now possible to enter a new batch of maiden gilts into the herd in one go rather than animal by animal.

To achieve this, please carry out the following:

- 1) Go to the Entry screen (via an icon or via Sows/Boars menu and choose the Entry layout)

- 2) Click on the + icon at the top of the screen next to the filter icon as shown above.
- 3) The screen below will appear. Enter the number of animals you wish to enter in the first box (30 in the example) and then enter the number of the tag you wish to start from (150). If you are using number tags then the format box can be left as it is and you will see the range of new gilt numbers that will be created in the Animal numbers boxes. Now simply enter the entry date of the maiden gilts and then click OK and they will be created for you on the Entry screen.

- 4) If you are using letters in your tags (either before or after the number) then see the example below on how to enter these:

- 5) Putting the letter before the “#” in the format box will create the tag as W150 or putting the letter after the “#” will create the tag as 150W.
